Skipjack tuna

**Eastern Pacific Ocean**

**Fishery:** Eastern Pacific Ocean  [IATTC](#), Mexico  |  Purse seine

---

**IDENTIFICATION**

**SCIENTIFIC NAME:** Katsuwonus pelamis

**SPECIES NAME(S):** Skipjack tuna

**COMMON NAMES:** Skipjack tuna

**STOCK IDENTIFICATION:**

It is likely that skipjack are distributed throughout the Pacific as a single population. Exchange of fish between the eastern and western regions is not common. The majority of catches occur in the eastern and western regions. Therefore assessments are conducted for both the eastern and western regions (Maunder 2015).

This fishery entered full assessment by the Marine Stewardship Council system in November 2014. Click [here](#) to link to the MSC fishery page and to learn more about the MSC fishery.

---

**ASSESSMENT**

**Strengths:**

- Fishing mortality rates and biomass are currently thought to be sustainable.
- Discarding of tunas is prohibited.
- There is a multi-year conservation plan in place, which has just been extended, for skipjack tuna (and other tuna species).
- A harvest control rule has been adopted.
- There is 100% observer coverage on large purse seine vessels operating on the high seas.

**Weaknesses:**

- There are no MSY based reference points used for skipjack tuna in the EPO.
- There are time/area closures in place for the purse seine fleet but these measures are not sufficient to manage the fish aggregating device (FAD) fishery.
- Purse seine fisheries can interact with ETP species.

**MSC**

- Northeastern Tropical Pacific purse seine yellowfin & skipjack tuna: MSC Certified

**RECOMMENDATIONS**

**RETAILERS & SUPPLY CHAIN**

- Monitor the progress in closing out conditions placed upon the MSC certification of the fishery and if agreed timelines are met, offer assistance in closing conditions where possible.
- Work with IATTC Members and Cooperating Non-Members to:
  - Adopt purse seine set limits during the 2018 Commission meeting.
  - Develop and implement comprehensive, precautionary harvest strategies with specific timelines for all tuna stocks, including the adoption and implementation of limit and target reference points, harvest control rules, monitoring strategies, operational objectives, performance indicators, and management strategy evaluation.
  - Strengthen compliance processes and make information on non-compliance public and continue to provide evidence of compliance with all IATTC Conservation and Management Measures in a timely manner.
  - Implement a 100% observer coverage requirement for all tuna stocks, including the adoption and implementation of limit and target reference points, harvest control rules, monitoring strategies, operational objectives, performance indicators, and management strategy evaluation.
  - Strengthen compliance processes and make information on non-compliance public and continue to provide evidence of compliance with all IATTC Conservation and Management Measures in a timely manner.
  - Increase compliance with the mandatory minimum 5% longline observer coverage rates by identifying and correcting non-compliance.
  - Implement a 100% observer coverage requirement – human and/or electronic – within five years for longline fisheries. Adopt a 100% observer coverage requirement for purse seine vessels where it is not already required and require the use of the best available observer safety equipment, communications and procedures.
  - Adopt effective measures for the use of non-entangling FAD designs as a precautionary measure to minimize the entanglement of sharks and other non-target species, and support research on biodegradable materials and transition to their use to mitigate marine debris.
  - More effectively implement, and ensure compliance with, existing RFMS bycatch requirements and take additional mitigation action, such as improving monitoring at sea, collecting and sharing operational-level, species-specific data, and adopting stringent...
compliance measures, including consequences for non-compliance for all gear types.

- Ensure all products are traceable back to legal sources. Verify source information and full chain traceability through traceability desk audits or third party traceability certification. For fisheries without robust traceability systems in place, invest in meaningful improvements to bring the fisheries and supply chain in compliance with best practices.
