Atlantic bluefin tuna
Eastern Atlantic and Mediterranean

**ASSESSMENT**

**Strengths**
- Stock assessment uses up-to-date methods; data and methodologies are publicly available.
- Regulations have been successful, allowing the stock recovery, reducing catches and fishing mortality.
- Control measures are in place to trace catches and guarantee the implementation of measures established in the recovery plan.
- Season closures and minimum landing weight are defined.
- Main fishing gears do not directly impact the seabed ecosystem.

**Weaknesses**
- Substantial uncertainty with the data used in the assessment (poor temporal and spatial coverage for detailed size and catch effort statistics for several fisheries).
- Substantial under-reporting of catches occurred through 2007 and catches were likely well above total allowable catch levels.
- Further data collection of bycatch species by fishing gear and the impact on endangered, threatened and protected species is needed.

**SCORES**

**Management Quality:**
- Management Strategy: \(\geq 6\)
- Managers Compliance: \(\geq 8\)
- Fishers Compliance: 9.3

**Stock Health:**
- Current Health: \(\geq 6\)
- Future Health: 10

**FIPS**
- No related FIPs

**MSC**
- No related MSC fisheries

**RECOMMENDATIONS**

**CATCHERS & REGULATORS**
1. Continue to support and implement the recovery management plan.
2. International Coalition for the Conservation of Atlantic Tuna (ICCAT) member countries should ensure compliance with all ICCAT rules (e.g. Catch Documentation Scheme, observers programme, catch reporting, etc).
3. Promote improvements in catch reporting, including bycatch data, and particularly in catches and size-at-catch data of purse seine for farming.
4. Continue to support and improve control, monitoring and surveillance activities.

**RETAILERS & SUPPLY CHAIN**
1. Communicate to ICCAT member countries support for the continuous implementation of the recovery plan.
2. Request improvements in catch reporting, including bycatch data, and particularly in catches and size-at-catch data of purse seine for farming.
3. Develop and adopt a control document to ensure tuna in your supply chain is harvested in accordance with all regulations.
