

Turbot Morocco

Fishery: [Morocco](#) [Morocco](#) [Longlines](#)

IDENTIFICATION

SCIENTIFIC NAME

Scophthalmus maximus

SPECIES NAME(S)

Turbot, Pregado

STOCK IDENTIFICATION

Wild turbot populations inhabit along all European coasts from the Arctic Circle to North West Africa (Morocco) (*Froese and Pauly 2019*). Some studies on the stock structure have been conducted on the NE Atlantic region and in the Mediterranean (e.g. (*Nielsen et al. 2004*)(*Turan et al. 2014*)), lacking the inclusion of the African region. Fishsource profiles are available for turbot in the [North Sea](#) and [Portugal](#).

The Fishery Committee for the Eastern Central Atlantic (CECAF) conducts assessments on some fisheries resources in FAO Area 34 but turbot is not yet considered (*FAO 2018*). Therefore, and in lack of an assessment known to be conducted, a management unit is considered within Moroccan waters.
