

Skipjack tuna Eastern Pacific Ocean

IDENTIFICATION

SCIENTIFIC NAME

Katsuwonus pelamis

SPECIES NAME(S)

Skipjack tuna

COMMON NAMES

Skipjack tuna

STOCK IDENTIFICATION

It is likely that skipjack are distributed throughout the Pacific as a single population. Exchange of fish between the eastern and western region is not common. The majority of catches occur in the eastern and western regions. Therefore assessments are conducted for both the eastern and western regions (Maunder 2015).

ASSESSMENT

Strengths

- Fishing mortality rates and biomass are currently thought to be sustainable.
- Discarding of tunas is prohibited.
- There is a multi-year conservation plan in place, which has just been extended, for skipjack tuna (and other tuna species).
- A harvest control rule has been adopted.
- There is 100% observer coverage on large purse seine vessels operating on the high seas.

Weaknesses

- There are no MSY based reference points used for skipjack tuna in the EPO.
- There are time/area closures in place for the purse seine fleet but these measures are not sufficient to manage the fish aggregating device (FAD) fishery.
- Purse seine fisheries can interact with ETP species.

SCORES

Management Quality:

Management Strategy	Managers Compliance	Fishers Compliance
≥ 6	≥ 6	≥ 6

Stock Health:

Current Health	Future Health
≥ 8	≥ 8

FIPS

- Eastern Pacific Ocean tropical tuna - purse seine (OPAGAC):
Stage 4, Progress Rating A, Type: Fip, Evaluation Start Date: 30 Sep 2016
- Eastern Pacific Ocean tropical tuna - purse seine (TUNACONS):
Stage 4, Progress Rating A, Type: Fip, Evaluation Start Date: 2 Jan 2017

MSC

- Mexico Baja California pole and line yellowfin and skipjack tuna:
Withdrawn
- Northeastern Tropical Pacific purse seine yellowfin & skipjack tuna:
MSC Certified

RECOMMENDATIONS

RETAILERS & SUPPLY CHAIN

- Work with IATTC Members and Cooperating Non-Members to:
 - Adopt purse seine set limits during the 2018 Commission meeting.
 - Develop and implement comprehensive, precautionary harvest strategies with specific timelines for all tuna stocks, including the adoption and implementation of limit and target reference points, harvest control rules, monitoring strategies, operational objectives, performance indicators, and management strategy evaluation.
 - Strengthen compliance processes and make information on non-compliance public and continue to provide evidence of compliance with all IATTC Conservation and Management Measures in a timely manner.
 - Implement a 100% observer coverage requirement for at-sea transshipment activities, as well as other measures that ensure transshipment activity is transparent and well-managed, and that all required data are collected and transmitted to the appropriate bodies in a timely manner.
 - Increase compliance with the mandatory minimum 5% longline observer coverage rates by identifying and correcting non-compliance.
 - Implement a 100% observer coverage requirement – human and/or electronic – within five years for longline fisheries. Adopt a 100% observer coverage requirement for purse seine vessels where it is not already required and require the use of the best-available observer safety equipment, communications and procedures.
 - Adopt effective measures for the use of non-entangling FAD designs as a precautionary measure to minimize the entanglement of sharks and other non-target species, and support research on biodegradable

materials and transition to their use to mitigate marine debris.

- More effectively implement, and ensure compliance with, existing RFMO bycatch requirements and take additional mitigation action, such as improving monitoring at sea, collecting and sharing operational-level, species-specific data, and adopting stronger compliance measures, including consequences for non-compliance for all gear types.
- Ensure all products are traceable back to legal sources. Verify source information and full chain traceability through traceability desk audits or third party traceability certification. For fisheries without robust traceability systems in place, invest in meaningful improvements to bring the fisheries and supply chain in compliance with best practices.

Fisheries

Within FishSource, the term "fishery" is used to indicate each unique combination of a flag country with a fishing gear, operating within a particular management unit, upon a resource. That resource may have a known biological stock structure and/or may be assessed at another level for practical or jurisdictional reasons.

A fishery is the finest scale of resolution captured in FishSource profiles, as it is generally the scale at which sustainability can most fairly and practically be evaluated.
