

# European flying squid European Union area 8c

## IDENTIFICATION

FAO

SCIENTIFIC NAME

*Todarodes sagittatus*

SPECIES NAME(S)

European flying squid

STOCK IDENTIFICATION

The species is found on the continental slope and oceanic waters of the Mediterranean Sea and NE Atlantic, and seamounts associated with the Mid-Atlantic Ridge (*Dunning and Wormuth 1998*). The stock structure is unknown and further studies are recommended (*ICES 2018*). No assessment could be found so a management unit covering ICES area 8c is considered.

# Fisheries

Within FishSource, the term "fishery" is used to indicate each unique combination of a flag country with a fishing gear, operating within a particular management unit, upon a resource. That resource may have a known biological stock structure and/or may be assessed at another level for practical or jurisdictional reasons. A fishery is the finest scale of resolution captured in FishSource profiles, as it is generally the scale at which sustainability can most fairly and practically be evaluated.
