

Pacific geoduck Mexico Gulf of California

IDENTIFICATION

SCIENTIFIC NAME

Panopea globosa

SPECIES NAME(S)

Pacific geoduck, Mexican geoduck, almeja de sifón

STOCK IDENTIFICATION

The fishery is relatively recent, started around the 2000s ([Aragón-Noriega et al. 2016](#)). No formal assessment is known to be conducted but a few management measures are in place in Baja California, Bahía Magdalena and Sonora ([DoF 2018](#)).

Fisheries

Within FishSource, the term "fishery" is used to indicate each unique combination of a flag country with a fishing gear, operating within a particular management unit, upon a resource. That resource may have a known biological stock structure and/or may be assessed at another level for practical or jurisdictional reasons. A fishery is the finest scale of resolution captured in FishSource profiles, as it is generally the scale at which sustainability can most fairly and practically be evaluated.
